

DOCUMENTS TO THE REQUESTOR

- R5NPL Status Shp.Zip (Shapefile) 9/30/15

As requested, the Superfund Division has released GIS boundary information for Region 5 NPL Sites. The following notes are made available with regard to the information provided.

The NPL boundaries in this shapefile were most likely derived from an ArcInfo Coverage. The HTML metadata provided in this file were associated with the ArcInfo Coverage. Unfortunately, the table providing additional information about the NPL sites associated with the ArcInfo Coverage was damaged, so we cannot easily associate the two files. Thus, we are kept from suggesting the metadata are associated with the shapefile, but we are providing it as a courtesy for some background. Note there are XML metadata included in the shapefile.

U.S. EPA in no way guarantees that the data are complete, accurate, or without defect. The user of the data must evaluate whether or not the data may be effectively employed for the purposes of the user. U.S. EPA in no way guarantees the accuracy of the boundaries and should not be held responsible in any way for products created or decisions made based on the extent of said boundaries.
